

MOUNTING SYSTEMS FOR ROOF TILES

MU7320

MOUNTING SYSTEMS FOR ROOF TILES

MU7320

Technical Characteristics

Application	Roof tiles
Orientation	Portrait and Landscape
Angle	Adjusted as per roof
Foundation	Wood or Metal
Installation	Aluminium brackets and stainless steel screws
Special Features	For all types of roof tiles

Our mounting system incorporates the solar panels on the roof's current structure without damaging the roof's insulation and is made from primary aluminium alloy.

Standard constructions are completed with two horizontal purlins that each support one row of solar units. The purlins are fastened to the roof frame and the solar units are fastened to the purlings with central and side clamps.

The units are most commonly placed vertically, however they can also be placed horizontally. Accessories are available for every type of roof structure.

We provide static load calculations and installation guides for the construction of each project based on the project's load bearing and location. All the load and static calculations strictly follow the relevant Euro Code specifications. Our systems are designed based on European standards and offer the highest specifications to ensure every project and your investment. All our specially designed solar panel mounting systems are certified by the internationally acclaimed organisation TÜV Rheinland.

Our systems are directly available from our warehouses across Cyprus together with all the necessary accessories for installation.

For large projects we offer profiles upon request. Our R & D department is at your service for any advice or technical support you may require. For large projects we also offer static load calculations upon request.
